

## WMDR2-core

Package in package 'Model'

WMDR2-core

Version 0.1.13 Phase 1.0 Proposed

jkl created on 2026-03-06. Last modified 2026-06-18

### WMDR2-core diagram

Class diagram in package 'WMDR2-core'

wmdr2-core

Notes

- temporalExtent shall be realized as time:interval
- temporal<Name> elements other than temporalGeometry shall be realized as arrays of dictionary objects for (begin) date, and the values of <Name>, e.g.,  
temporalTerritory = [{  
 "date": "2000-01-01",  
 "territory": "<ISO1>"  
}],  
{  
 "date" 2024-07-13",  
 "territory": "<ISO2>"  
}.  
3. Following the OGC Features model, geometry = geolocation = coordinates + elevation  
4. Schedules

v0.1.4 Introduce instrument class.

v0.1.5 Expand instrument class.

v0.1.6 introduce more elements

v0.1.8

- require and expanded observation.observedDomain (includes domain, domainFeature [0..1], featureName [0..1])
- introduce temporalGeometry.methods

v0.1.9

- introduce deployment.temporalGeometry [0..1], verticalDistanceFromReferenceSurface [0..1]
- rename localReferenceSurface to referenceSurface
- rename observation.observedVariable to observation.observedProperty
- remove xType suffix to manage expectations: many elements are 'Types', i.e., codelist-based

v0.1.10

- rename environment.temporalTopographyBathymetry to topographyBathymetry
- add environment.temporalSurfaceRoughness
- rename instrumentCapability to instrument
- rename instrumet.observableVariable to observedProperty, observableGeometry to observedGeometry.

v.0.1.11

- rename observedDomain to domain
- move reporting.officialStatus to deployment.temporalOfficialStatus
- remove inline deployment.temporalObservingSchedule as being redundant to the explicit association.
- update cardinality of association to deployment.temporalObservingSchedule
- model verticalDistanceFromReferenceSurface with "value" and "uom"
- update documentation

v0.1.12

- rename observation.domain.domain to observation.domain.domainName

v0.1.13

- remove facility.declaredReportingStatus as this is ill-defined. Instead, facility.temporalProgramAffiliation.reportingStatus should be used.

WMDR2-core

Version 0.1.13

jkl created on 2026-03-06. Last modified 2026-06-18

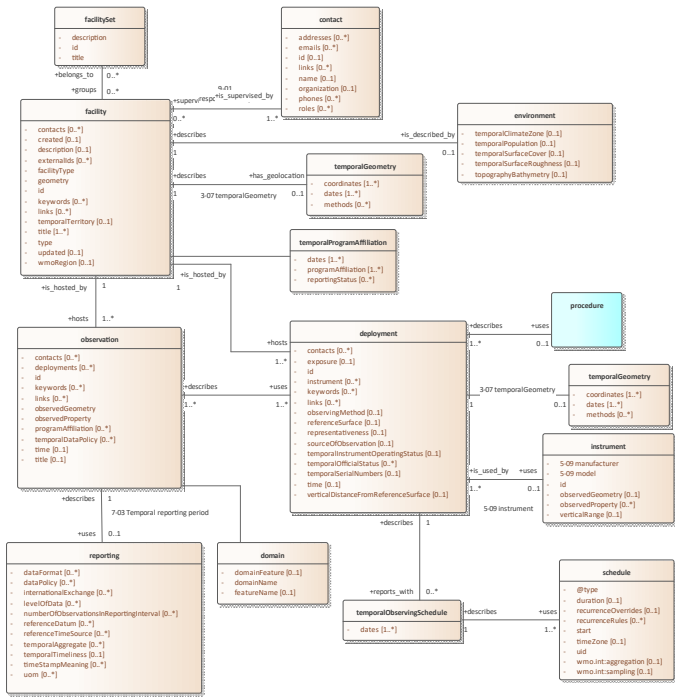

Figure 1: WMDR2-core

## WMDR2-core-logical diagram

Class diagram in package 'WMDR2-core'

### WMDR2core

#### Notes

- temporalExtent shall be realized as time:interval
- temporal-<Name> elements other than temporalExtent shall be realized as an array of two arrays, one for times, one for the values of <Name>, e.g., temporalTerritory = [[2000-01-01, 2024-07-13], ["https://codes.wmo.int/wmdr/territory/<ISO1>", "https://codes.wmo.int/wmdr/territory/<ISO2>"]].
- Following the OGC Features model, geometry = geolocation = coordinates + elevation

version 0.1.4: simplify observation, specifically specification of 1-01

WMDR2-core-logical

Version 0.1.4

domain

Class in package 'WMDR2-core'

Describes the physical domain, i.e. larger-scale environmental target or ultimate-feature-of-interest, of an observation.

domain

Version 1.0 Phase 1.0 Proposed

jkl created on 2026-06-10. Last modified 2026-06-18

facility

Class in package 'WMDR2-core'

Facility properties payload of the WMDR2 full record. Root Feature geometry/time are modeled on fullRecord, not here.

facility

instrument

Class in package 'WMDR2-core'

Describes instrument capabilities, not a specific instrument instance.  
For semantic consistency, terms like observedProperty and observedGeometry are used, even though they just describe the instrument capabilities, not the actual observations. With this, instrument becomes re-usable between deployments and even facilities.

instrument

| <div><div><div><div><div> observedProperty : Private</div><div>Alias: OMS:ObservedProperty, iop:Variable</div></div></div><div><p>The observedVariable is constructed following I-ADOPT ontology approaches, with elements described in a unified vocabulary hosted at <a href="http://codes.wmo.int/wmdr2">codes.wmo.int/wmdr2</a>.</p><p>NB: observedVariable will be a LONG list of entries, each record comprised of notation, name, description. The notation is a unique identifier, not necessarily human-readable. The name is potentially human-readable. The description is a fully fledged definition, human-readable and describing all relevant aspects of an observed variable. It is derived from the observedProperty, the object of interest, the matrix and domain, as well as constraints. Matrix and constraints are defined in controlled vocabularies that may be domain-specific.</p><p>Examples include:</p><ul style="list-style-type: none"><li>- observableProperty: state variable (e.g., temperature, pressure, leaf-area-index (LAI), ...), or another property (e.g., thickness, concentration, scattering coefficient, color, ...)</li><li>- objectOfInterest: sea ice, CO2, aerosol particles, chlorophyll</li><li>- observablePropertyConstraints: a conventional level above ground (e.g., 2m above ground for temperature measurements), a size fraction (e.g., PM2.5), a specific wavelength (e.g., 635 nm), a pressure (range), a temperature (range), a humidity (range), etc., as relevant for the result of the observation. Constraints shall be documented as name-value pairs, where the names shall come from a code list, and the values shall come from a code list depending on the name, or be free text.</li><li>- matrix: atmosphere, interstitial air in the root space, air in an ice core, sea surface, soil, dry air, ...</li></ul><p>These elements will be supported by code lists from <a href="http://codes.wmo.int/wmdr2">codes.wmo.int/wmdr2</a>.</p><p>Applications may want to guide users to select a specific observedVariable by offering groupings, filtering, or tree-like visualizations according to matrix, objectOfInterest, etc.</p></div><div>[ Is static True. reporting

Class in package 'WMDR2-core'

Observation reporting metadata represented as aligned arrays. temporalTimeliness is itself a temporal wrapper.

reporting

schedule

Class in package 'WMDR2-core'

Reusable JSCalendar Event schedule used by deployment.temporalObservingSchedule references. WMDR-specific extensions are represented with wmo.int:\* properties.

| ATTRIBUTES                                                                                                                                                                                                                                          |                                                   |

temporalObservingSchedule

Class in package 'WMDR2-core'

When are observations made? Describes a temporal schedule/coverage, e.g. "from Feb-Oct on working days from 06-18 UTC".

Objects like

{ "date": date, "schedule": str }, whereby "schedule" is a reference to a re-usable schedule object.

| ATTRIBUTES                                                                                                                                                                                                                                              |  |
